

Patent Claims

1. Plant container with a pot (1) and a coaster (2) made of plastic, in particular as a hanging basket-type flowerpot, whereby the coaster (2) which is closed at the bottom and serves as a water dish is to be undetachably attached by coupling devices to the pot (1) which is provided with holes on the bottom, **characterized in that** the coaster (2) and the pot (1) are mutually engaged via at least one guide surface (9, 16) tapering in a conical shape and they become engaged with one another by means of coupling elements (11, 15) via a rotational movement.
2. Plant container according to Claim 1, **characterized in that** the guide face is designed on a central dome (8, 14) in the form of a truncated cone.
3. Plant container according to Claim 2, **characterized in that** the dome (8, 14) is provided with coupling elements (11, 15).
4. Plant container according to Claim 2 or 3, **characterized in that** both the pot (1) and the coaster (2) are designed with a dome (8, 14) in the shape of a truncated cone, the pot and the coaster having abutting guide faces (9, 16).
5. Plant container according to one of Claims 1 through 4, **characterized in that** the coupling elements are designed in the form of hooks (15) on the one hand and holes (11) in the wall on the other hand.

6. Plant container according to Claim 5, **characterized in that** the hooks (15) are designed so they protrude upward on an end face of the dome (14) of the coaster (2) and openings (11) are provided in an end face (10) of the dome of the pot (1), the hooks (15) engaging in these openings in coupling engagement with mutual rotation.
7. Plant container according to Claim 6, **characterized in that** the hooks (15) have a hook mouth (18) pointing in the radial direction on at least one side.
8. Plant container according to Claim 7, **characterized in that** the openings (11) are designed with a width that narrows in the direction of rotation in the manner of a keyhole.
9. Plant container according to one of Claims 6 through 8, **characterized in that** the openings (11) are designed to be at least partially covered with a roof.
10. Plant container according to one of Claims 1 through 9, **characterized in that** the coupling elements are secured by catch elements (24).
11. Plant container according to one of Claims 2 through 10, **characterized in that** the dome (14) protrudes upward above an edge (12) of the coaster.
12. Plant container according to one of Claims 1 through 11, **characterized in that** the coaster (2) is provided with at least one spacer element (17) with respect to the pot (1).

13. Plant container according to Claim 11, **characterized in that** the spacer element (17) is designed with a ring shape in the coaster (2).
14. Plant container according to Claim 13, **characterized in that** the spacer element consists of an interrupted row of ring sections (33).
15. Plant container according to Claim 13 or 14, **characterized in that** the spacer element (33) consists of a hollow rib which is open at the bottom and whose hollow space is subdivided by at least one web.
16. Plant container according to Claim 1, **characterized in that** the pot forms a guide face with a lower wall area whereby the coaster has guide elements which protrude inward toward the guide face within an edge extending around the guide face at a distance.
